PERFORMANCE AUDIT · META ADS

The facebook placement segment runs PKR 88,040 over baseline efficiency

Facebook carries **61%** of spend and converts at **PKR 112** vs the **PKR 50** baseline. It still drives 1418 conversions, so the move is to rebalance budget toward your more efficient segments — not cut it. Closing the gap is worth about **PKR 88,040**. is the clearest quantified opportunity in this audit.

EXECUTIVE SUMMARY

What this audit found

> Facebook carries **61%** of spend and converts at **PKR 112** vs the **PKR 50** baseline. It still drives 1418 conversions, so the move is to rebalance budget toward your more efficient segments — not cut it. Closing the gap is worth about **PKR 88,040**. is the single most important number in this audit.

Lead issue: The facebook placement segment runs **PKR 88,040** over baseline efficiency. The facebook placement segment runs at **PKR 112** CPA vs a **PKR 50** platform baseline — **PKR 88,040** of that spend is excess cost above baseline efficiency.

Why it matters: Findings are ranked by leverage — the most damaging issue leads (severity and root cause gravity first, then confidence and recoverable spend), not simply the biggest dollar figure.

Next move: Start with the first issue in this report, then re run the audit after the next full reporting cycle to measure the delta.

THIS PERIOD	PER QUARTER	ANNUALIZED
112	≈ 336	≈ 1,344
identified opportunity	if the pattern persists	directional projection

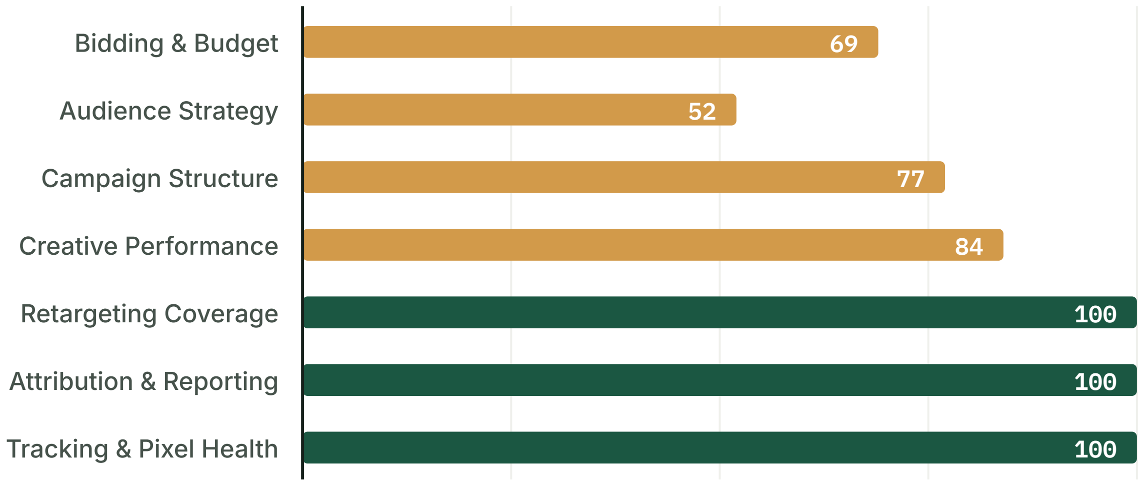
Projection multiplies the measured period impact and assumes spend and performance patterns remain stable.

01

HEALTH SCORE

Where the 66 comes from

The score breakdown shows which account areas are healthy and which areas generated findings.



Scores below 85 are treated as pressure points.

02

ACCOUNT SCORECARD

The headline metrics, against target

Each account metric measured against its industry benchmark or your declared target, with a clear verdict — so every claim in this audit is anchored to a number you can check.

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Total spend	PKR 257,697	–	—
Conversions	5,203	–	—
Click through rate	6.86%	≥ 0.6%	Strong
Avg cost per click	PKR 8.48	–	—
Cost per acquisition	PKR 50	PKR 40	24% over target

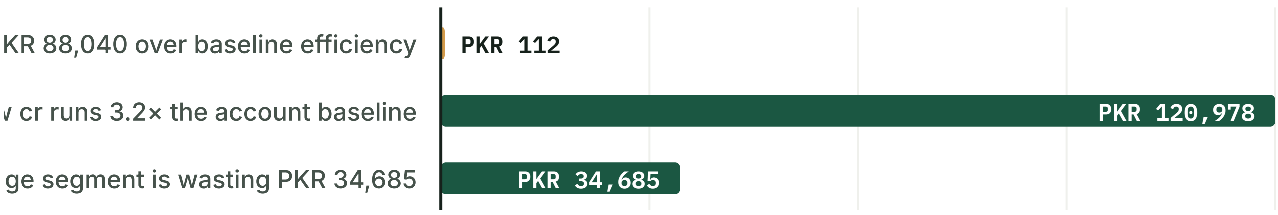
CPA target (PKR 40) from your intake; CTR benchmark for Lead Gen on Meta Ads.

03

MONEY MAP

Where the recoverable spend is concentrated

Only findings with measured financial evidence appear here. Structural risks stay out of this chart unless the engine can quantify them.



Measured recoverable spend by finding.

04

FINDINGS

10 findings, ranked by impact

Findings are ordered by leverage — severity and root cause gravity first, then confidence, then recoverable spend.

#	FINDING	SEVERITY	IMPACT
1	The facebook placement segment runs PKR 88,040 over baseline efficiency	Critical	PKR 112 recoverable
2	Meta CPA varies sharply by campaign — alt Testing phase 2 |new cr runs 3.2× the account baseline	High	PKR 120,978 recoverable
3	The 18 24 age segment is wasting PKR 34,685	High	PKR 34,685 recoverable
4	Meta CPA is over target — driven by weak post click conversion, not expensive clicks	High	Optimization
5	All Meta campaigns are conversion objective — no upper funnel spend is building future demand	Medium	Needs review
6	The instagram placement segment buys impressions inefficiently	Medium	Account hygiene risk
7	The 25 34 age segment buys impressions inefficiently	Medium	Account hygiene risk
8	6 Meta campaigns run uncapped automatic bidding	Medium	Needs review

Money impact is shown only when the account data supports a reliable estimate. Other rows are still important business risks.

05

CAMPAIGN PERFORMANCE

Every campaign, with a verdict

Each campaign's own numbers against the account baseline (cost per result **PKR 50**) — so the diagnosis is grounded in per campaign performance, not a blended average.

CAMPAIGN	SPEND	RESULTS	COST / RESULT	STATUS	VERDICT
Alt Testing phase 2 | bot	PKR 116,010	1,057	PKR 110	Above avg	Converting, but above the account average — room to tighten.
Alt Testing phase 4th testing – new –lp single cr	PKR 57,888	431	PKR 134	2.7x baseline	Converting at 2.7× the account average — the main efficiency drag.
Alt Testing phasenew whatsapp	PKR 42,859	3,308	PKR 13	At/below avg	At or below the account's average cost — protect and scale this one.
Alt Testing phase 3 | new videos	PKR 35,956	374	PKR 96	Above avg	Converting, but above the account average — room to tighten.
Alt Testing phase 2 |new cr	PKR 3,775	24	PKR 157	3.2x baseline	Converting at 3.2× the account average — the main efficiency drag.
New Leads campaign | Sales Person Hiring	PKR 1,210	9	PKR 134	2.7x baseline	Converting at 2.7× the account average — the main efficiency drag.

Cost per result uses each campaign's own conversions; the verdict compares it to the account baseline.

06

CAMPAIGN DEEP DIVE

Top campaigns, scored

Each top spending campaign measured against its CTR benchmark and CPA target, with a verdict and its next move — the per campaign view a strategist works from.

Above avg PKR 116,010

Alt Testing phase 2 | bot

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 116,010	–	—
Conversions	1,057	–	—
Click through rate	3.94%	≥ 0.6%	Strong
Cost per result	PKR 110	vs PKR 40	174% over

Converting, but above the account average — room to tighten.

1. Above the account average — tighten targeting or add/lower a cost per result cap.
2. Compare its audience and placement mix against the best performing campaign.
3. Re evaluate next cycle and reallocate toward what converts.

2.7x baseline PKR 57,888

Alt Testing phase 4th testing – new –lp single cr

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 57,888	–	—
Conversions	431	–	—
Click through rate	4.20%	≥ 0.6%	Strong
Cost per result	PKR 134	vs PKR 40	236% over

Converting at 2.7× the account average — the main efficiency drag.

1. Treat as the priority — diagnose targeting, audience, and bidding before any budget change.
2. Do not apply an account wide cut; that would starve the healthy campaigns.
3. Re check after a full reporting cycle once the fix is in.

At/below avg PKR 42,859

Alt Testing phasenew whatsapp

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 42,859	–	—
Conversions	3,308	–	—
Click through rate	25.83%	≥ 0.6%	Strong
Cost per result	PKR 13	vs PKR 40	On target

> **At or below the account's average cost — protect and scale this one.**

1. Protect this campaign — it is carrying the account's efficiency.
2. Scale budget in small increments (~**20%**) while cost per result holds.
3. Add a backup ad group or audience layer to de risk creative/audience fatigue.

07

EVIDENCE

The evidence, finding by finding

Each finding shows what is happening, the business impact, supporting evidence, confidence, and the recommended fix.

Critical Confidence: High Ease: Easy

The facebook placement segment runs PKR 88,040 over baseline efficiency

What is happening: The facebook placement segment runs at **PKR 112** CPA vs a **PKR 50** platform baseline — **PKR 88,040** of that spend is excess cost above baseline efficiency.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: facebook carries **61%** of spend and converts at **PKR 112** vs the **PKR 50** baseline. It still drives 1418 conversions, so the move is to rebalance budget toward your more efficient segments — not cut it. Closing the gap is worth about **PKR 88,040**.

PKR 112 recoverable

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 112	vs PKR 50	125% over
Recoverable spend	PKR 112	–	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this can recover PKR 112 in the next comparable period.**

1. Review the facebook placement segment in the platform UI to confirm the underperformance.
2. Shift budget away from facebook toward your higher converting segments — it still produces 1418 conversions, so do Not exclude it outright. Start with a 15–25% reallocation and re measure.
3. Reallocate the recovered budget to segments at or below baseline CPA.

High Confidence: High Ease: Easy

Meta CPA varies sharply by campaign — alt Testing phase 2 |new cr runs 3.2× the account baseline

What is happening: The account average CPA of **PKR 50** hides a wide spread across campaigns. alt Testing phase 2 |new cr runs at **PKR 157** CPA — 3.2× the **PKR 50** account baseline. By contrast, alt Testing phasenew whatsapp runs at **PKR 13** — at or below baseline. Treating the account as uniformly inefficient (an across the board cut) would damage the healthy campaign while leaving the real offender untouched.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: **PKR 120,978** is recoverable by bringing these 5 campaigns toward the **PKR 50** account baseline — without touching campaigns already at or below it.

EVIDENCE	VALUE
Confidence	High
Min sample passed	Yes

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this can recover PKR 120,978 in the next comparable period.**

1. Isolate alt Testing phase 2 |new cr and diagnose its CPA driver — audience/targeting, landing page, or bidding — before changing account wide settings.
2. Protect and consider scaling alt Testing phasenew whatsapp (**PKR 13** CPA); it is carrying the account.
3. Manage to per campaign CPA targets rather than a single blended account average.

High Confidence: High Ease: Easy

The 18 24 age segment is wasting PKR 34,685

What is happening: The 18 24 age segment runs at **PKR 79** CPA vs a **PKR 50** platform baseline — **PKR 34,685** of that spend is excess cost above baseline efficiency.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: **PKR 34,685** in this segment is recoverable by reducing or excluding it. Reallocate to segments performing at or below the **PKR 50** baseline CPA.

PKR 34,685 recoverable

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 79	vs PKR 50	60% over
Recoverable spend	PKR 34,685	–	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this can recover PKR 34,685 in the next comparable period.**

1. Review the 18 24 age segment in the platform UI to confirm the underperformance.
2. Exclude or down bid the 18 24 segment after confirming the trend on the next full reporting cycle.
3. Reallocate the recovered budget to segments at or below baseline CPA.

High Confidence: High Ease: Hard

Meta CPA is over target — driven by weak post click conversion, not expensive clicks

What is happening: Actual CPA **PKR 49.53** vs target **PKR 40** (**23.8%** over target). Actual **CTR 6.86**% vs benchmark (warning **0.6%**, good **1.2%**). CPA is over target but CTR is at/above benchmark — the bottleneck is post click conversion (landing page, offer, or tracking), not click cost.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: CPA is **23.8%** over your **PKR 40** target. Because CTR is healthy, the highest leverage fix is post click: landing page, offer, and conversion tracking — not bids or creative.

Optimization

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 50	vs PKR 40	24% over
Confidence	High	–	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: this is a high leverage optimization — fixing the driver moves cost per result toward your target without spending more.**

1. Audit the landing page: load speed, message match, and friction in the conversion step.
2. Verify conversion tracking is firing correctly — under counting inflates CPA.
3. Test offer / Cta changes before increasing bids.

Medium Confidence: Medium Ease: Easy

All Meta campaigns are conversion objective — no upper funnel spend is building future demand

What is happening: All 6 Meta campaigns run conversion or lead objectives (**PKR 257,697** in detected spend). The account relies entirely on existing market awareness. As audiences saturate, CPAs rise because no fresh awareness traffic feeds the funnel. Retargeting pools shrink and prospecting CPAs climb without upper funnel investment refreshing them.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: CPAs will continue rising as current audiences saturate without upper funnel campaigns refreshing the prospecting pool.

EVIDENCE	VALUE
Upper funnel campaigns	0

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this removes account drag before it turns into measurable waste.**

1. Allocate 10–**15%** of Meta spend to a Reach or Traffic campaign targeting a broad cold audience.
2. Use this upper funnel traffic as a retargeting audience for conversion campaigns (30/60/90 day windows).
3. Test video creative in the awareness campaign — cost efficient for reach and builds brand recognition.

Medium Confidence: High Ease: Easy

The instagram placement segment buys impressions inefficiently

What is happening: The instagram placement segment earns a **2.40%** CTR — **9%** of the best placement segment's **25.79%**, on **PKR 55,327** of spend. You are paying for impressions that don't engage than the rest of the placement mix.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: Reallocating this segment's impression budget to better engaging placement segments would buy more qualified clicks at the same spend.

EVIDENCE	VALUE
Cpm	635
Segment	Instagram
Confidence	High
Ctr percent	2.4%
Baseline cpm	582
Best ctr percent	25.8%

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this removes account drag before it turns into measurable waste.**

1. Exclude or down weight the instagram placement segment and shift that budget to the better performing placement segments.
2. If the placement is worth keeping, test a placement native creative variant rather than running the same asset everywhere.
3. Re check CPM and CTR by segment after the change to confirm the efficiency gain.

08

ROADMAP & ACTION PLAN

The phased plan — what to do, in order

This is your action plan, sequenced by leverage: start at Phase 1 this week (stop active waste), then tighten efficiency, then build durable structure. Each item shows the move, the effort, and what it recovers.

Phase 1 THIS WEEK

Stop the bleeding — fix what is actively wasting spend or blocking delivery right now.

1. **The facebook placement segment runs PKR 88,040 over baseline efficiency:** Review the facebook placement segment in the platform UI to confirm the underperformance. `~1 HOUR` PKR 112 recoverable

Phase 2 WEEKS 2–4

Tighten efficiency — pull the high impact inefficiencies back toward target.

1. **Meta CPA varies sharply by campaign — alt Testing phase 2 |new cr runs 3.2× the account baseline:** Isolate alt Testing phase 2 |new cr and diagnose its CPA driver — audience/targeting, landing page, or bidding — before changing account wide settings. `~1 HOUR` PKR 120,978 recoverable
2. **The 18 24 age segment is wasting PKR 34,685:** Review the 18 24 age segment in the platform UI to confirm the underperformance. `~1 HOUR` PKR 34,685 recoverable
3. **Meta CPA is over target — driven by weak post click conversion, not expensive clicks:** Audit the landing page: load speed, message match, and friction in the conversion step. `TECHNICAL` Optimization

Phase 3 ONGOING

Structure & scale — clear hygiene risks and build durable account structure.

1. **All Meta campaigns are conversion objective — no upper funnel spend is building future demand:** Allocate 10–**15%** of Meta spend to a Reach or Traffic campaign targeting a broad cold audience. `~1 HOUR` Needs review
2. **The instagram placement segment buys impressions inefficiently:** Exclude or down weight the instagram placement segment and shift that budget to the better performing placement segments. `~1 HOUR` Account hygiene risk
3. **The 25 34 age segment buys impressions inefficiently:** Exclude or down weight the 25 34 age segment and shift that budget to the better performing age segments. `~1 HOUR` Account hygiene risk
4. **6 Meta campaigns run uncapped automatic bidding:** Set a cost per result goal (cost cap) at or slightly above your target on the highest spend campaigns. `~1 HOUR` Needs review
5. **Ad set budgets are below Meta's learning phase minimum:** Consolidate overlapping ad sets so budget concentrates enough volume to exit learning. `~1 HOUR` Needs review

METHOD

Benchmarks, confidence & assumptions

- **Numbers.** Every figure comes from verified account data. The report does not invent chart values.
- **Benchmarks.** No benchmark section is rendered because no benchmark facts were available.
