EXECUTIVE SUMMARY

What this audit found

> The single most important finding in this audit: Verify the conversion event before trusting any performance read on alt Testing phasenew whatsapp. The account's true baseline cost per result is **PKR 115,** not the **PKR 53** the blended report shows.

Lead issue: alt Testing phasenew whatsapp reports conversions too cheap to be genuine — likely a misconfigured conversion event. "alt Testing phasenew whatsapp" reports 3,188 conversions at **PKR 13** — 8.57× cheaper than the **PKR 115** median campaign. A conversion that cheap, at this volume, is almost never a genuine lead or purchase: it is the fingerprint of a click to chat / button tap or wrong pixel event being counted as a conversion. Until it is verified, this campaign's results cannot be trusted — and because they are blended into the account, they have collapsed the apparent baseline cost from a true **PKR 115** to a misleading **PKR 53**.

Why it matters: Findings are ranked by leverage — the most damaging issue leads (severity and root cause gravity first, then confidence and recoverable spend), not simply the biggest dollar figure.

Next move: Start with the first issue in this report, then re run the audit after the next full reporting cycle to measure the delta.

THIS PERIOD	PER QUARTER	ANNUALIZED
115	**≈ 345**	**≈ 1,380**
identified opportunity	if the pattern persists	directional projection

Projection multiplies the measured period impact and assumes spend and performance patterns remain stable.

01

HEALTH SCORE

Where the 74 comes from

The score breakdown shows which account areas are healthy and which areas generated findings.

Scores below 85 are treated as pressure points.

02

ACCOUNT SCORECARD

The headline metrics, against target

Each account metric measured against its industry benchmark or your declared target, with a clear verdict — so every claim in this audit is anchored to a number you can check.

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Total spend	PKR 280,064	–	—
Conversions	5,259	–	—
Click through rate	6.04%	≥ 0.6%	Strong
Avg cost per click	PKR 8.79	–	—
Cost per acquisition	PKR 115	PKR 40	186% over target

CPA target (PKR 40) from your intake; CTR benchmark for Lead Gen (from your profile) on Meta Ads. Cost per acquisition excludes campaigns whose conversions are too cheap to be genuine (see the tracking-integrity finding) — the blended figure would understate the real cost.

03

DATA SCOPE

Active vs paused campaigns

The audit reviews every campaign that spent in this period. The totals are split below so you can see what came from live campaigns versus paused ones — the per campaign comparison and the recommendations focus on the active set you can still optimise.

CAMPAIGNS	SPEND	CONVERSIONS	COUNT
Active	PKR 274,560	5,224	5
Paused	PKR 5,504	35	2
Total	PKR 280,064	5,259	7

Active = currently delivering. Paused = spent earlier in the window but not delivering now. Recommendations target the active set.

04

MONEY MAP

Where the recoverable spend is concentrated

Only findings with measured financial evidence appear here. Structural risks stay out of this chart unless the engine can quantify them.

EVIDENCE	VALUE
The islamabad capital territory region segment is wasting pkr 9,087	PKR 9,087

05

FINDINGS

10 findings, ranked by impact

Findings are ordered by leverage — severity and root cause gravity first, then confidence, then recoverable spend.

#	FINDING	SEVERITY	IMPACT
1	Alt Testing phasenew whatsapp reports conversions too cheap to be genuine — likely a misconfigured conversion event	Critical	Optimization
2	Meta CPA is over target — driven by weak post click conversion, not expensive clicks	High	Optimization
3	The Islamabad Capital Territory region segment is wasting PKR 9,087	Medium	PKR 9,087 recoverable
4	The instagram placement is part of the same inefficiency (placement view)	Medium	Same spend (counted above)
5	All Meta campaigns are conversion objective — no upper funnel spend is building future demand	Medium	Needs review
6	The 18 24 age segment buys impressions inefficiently	Medium	Account hygiene risk
7	7 Meta campaigns run uncapped automatic bidding	Medium	Needs review
8	Ad set budgets are below Meta's learning phase minimum	Medium	Needs review

Money impact is shown only when the account data supports a reliable estimate. Other rows are still important business risks.

06

CAMPAIGN PERFORMANCE

Every active campaign, compared

All 5 active campaigns compared against the active baseline (cost per result **PKR 115**). 2 paused campaigns are shown separately in the Active vs Paused breakdown.

CAMPAIGN	SPEND	RESULTS	COST / RESULT	STATUS	VERDICT
Alt Testing phase 2 | bot	PKR 114,438	1,039	PKR 110	At/below avg	At or below the account's average cost — protect and scale this one.
Alt Testing phase 3 | new videos	PKR 59,878	578	PKR 104	At/below avg	At or below the account's average cost — protect and scale this one.
Alt Testing phase 4th testing – new –lp single cr	PKR 56,236	408	PKR 138	Above avg	Converting, but above the account average — room to tighten.
Alt Testing phasenew whatsapp	PKR 42,744	3,188	PKR 13	Tracking?	Conversions too cheap to be genuine — verify the conversion event before trusting or scaling this campaign.
New Leads campaign | Sales Person Hiring – Copy	PKR 1,265	11	PKR 115	Above avg	Converting, but above the account average — room to tighten.

Cost per result uses each campaign's own conversions; the verdict compares it to the active baseline. Comparison covers active campaigns; the paused total is in the Active vs Paused breakdown.

07

CAMPAIGN DEEP DIVE

Top campaigns, scored

Each top spending campaign measured against its CTR benchmark and CPA target, with a verdict and its next move — the per campaign view a strategist works from.

At/below avg PKR 114,438

Alt Testing phase 2 | bot

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 114,438	–	—
Conversions	1,039	–	—
Click through rate	3.80%	≥ 0.6%	Strong
Cost per result	PKR 110	vs PKR 40	175% over

At or below the account's average cost — protect and scale this one.

1. Protect this campaign — it is carrying the account's efficiency.
2. Scale budget in small increments (~**20%**) while cost per result holds.
3. Add a backup ad group or audience layer to de risk creative/audience fatigue.

At/below avg PKR 59,878

Alt Testing phase 3 | new videos

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 59,878	–	—
Conversions	578	–	—
Click through rate	3.84%	≥ 0.6%	Strong
Cost per result	PKR 104	vs PKR 40	159% over

At or below the account's average cost — protect and scale this one.

1. Protect this campaign — it is carrying the account's efficiency.
2. Scale budget in small increments (~**20%**) while cost per result holds.
3. Add a backup ad group or audience layer to de risk creative/audience fatigue.

Above avg PKR 56,236

Alt Testing phase 4th testing – new –lp single cr

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 56,236	–	—
Conversions	408	–	—
Click through rate	4.18%	≥ 0.6%	Strong
Cost per result	PKR 138	vs PKR 40	245% over

> **Converting, but above the account average — room to tighten.**

1. Above the account average — tighten targeting or add/lower a cost per result cap.
2. Compare its audience and placement mix against the best performing campaign.
3. Re evaluate next cycle and reallocate toward what converts.

08

EVIDENCE

The evidence, finding by finding

Each finding shows what is happening, the business impact, supporting evidence, confidence, and the recommended fix.

Critical `Confidence: High` `Ease: Hard`

Alt Testing phasenew whatsapp reports conversions too cheap to be genuine — likely a misconfigured conversion event

What is happening: "alt Testing phasenew whatsapp" reports 3,188 conversions at **PKR 13** — 8.57× cheaper than the **PKR 115** median campaign. A conversion that cheap, at this volume, is almost never a genuine lead or purchase: it is the fingerprint of a click to chat / button tap or wrong pixel event being counted as a conversion. Until it is verified, this campaign's results cannot be trusted — and because they are blended into the account, they have collapsed the apparent baseline cost from a true **PKR 115** to a misleading **PKR 53**.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: Verify the conversion event before trusting any performance read on alt Testing phasenew whatsapp. The account's true baseline cost per result is **PKR 115,** not the **PKR 53** the blended report shows.

EVIDENCE	VALUE
Confidence	High
Diagnostic	Yes
Distortion	2
Trusted spend	PKR 237,320
Net recoverable	PKR 0

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: this is a high leverage optimization — fixing the driver moves cost per result toward your target without spending more.**

1. Open alt Testing phasenew whatsapp in the platform's Events/conversion settings and confirm exactly which event is firing as the conversion.
2. If it is a button tap (WhatsApp / click to chat) or a page view rather than a genuine lead or purchase, fix the event mapping or stop counting it as a conversion.
3. Cross check against your Crm or inbox: how many of these conversions became real conversations or sales?
4. Re baseline the account to **PKR 115** for all reporting and scaling decisions until the event is corrected.

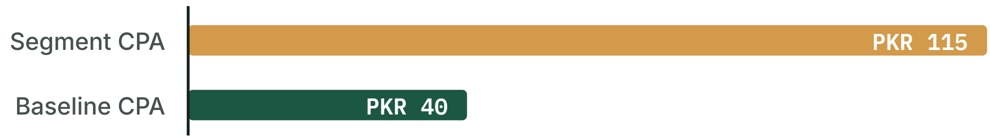
High Confidence: High Ease: Hard

Meta CPA is over target — driven by weak post click conversion, not expensive clicks

What is happening: Actual CPA **PKR 114.59** vs target **PKR 40** (**186.5%** over target). Actual **CTR 6.04**% vs benchmark (warning **0.6%**, good **1.2%**). CPA is over target but CTR is at/above benchmark — the bottleneck is post click conversion (landing page, offer, or tracking), not click cost.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: CPA is **186.5%** over your **PKR 40** target. Because CTR is healthy, the highest leverage fix is post click: landing page, offer, and conversion tracking — not bids or creative.



Optimization

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 115	vs PKR 40	186% over
Confidence	High	–	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: this is a high leverage optimization — fixing the driver moves cost per result toward your target without spending more.**

1. Audit the landing page: load speed, message match, and friction in the conversion step.
2. Verify conversion tracking is firing correctly — under counting inflates CPA.
3. Test offer / Cta changes before increasing bids.

Medium Confidence: Medium Ease: Hard

The Islamabad Capital Territory region segment is wasting PKR 9,087

What is happening: The Islamabad Capital Territory region segment has a **PKR 720** cost per result (CPA) vs the account's **PKR 115** baseline — **PKR 9,087** of its spend is the excess above what that result would cost at the baseline rate.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: **PKR 9,087** in this segment is recoverable by reducing or excluding it. Reallocate to segments performing at or below the **PKR 115** baseline CPA.

PKR 9,087 recoverable

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 720	vs PKR 115	529% over
Recoverable spend	PKR 9,087	–	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this can recover PKR 9,087 in the next comparable period.**

1. Review the Islamabad Capital Territory region segment in the platform UI to confirm the underperformance.
2. Exclude or down bid the Islamabad Capital Territory segment after confirming the trend on the next full reporting cycle.
3. Reallocate the recovered budget to segments at or below baseline CPA.

Medium Confidence: Medium Ease: Easy

The instagram placement is part of the same inefficiency (placement view)

What is happening: The instagram placement segment has a **PKR 119** cost per result (CPA) vs the account's **PKR 115** baseline — **PKR 2,277** of its spend is the excess above what that result would cost at the baseline rate.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: The instagram placement has a **PKR 119** cost per result vs the account's **PKR 115** baseline cost per result, on **PKR 59,000** of spend. This is the placement view of an inefficiency the campaign level finding already counts — acting here recovers part of that same spend, not additional money.

Same spend (counted above)

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 119	vs PKR 115	On target
Recoverable spend	PKR 119	–	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this can recover PKR 119 in the next comparable period.**

1. Review the instagram placement segment in the platform UI to confirm the underperformance.
2. Exclude or down bid the instagram segment after confirming the trend on the next full reporting cycle.
3. Reallocate the recovered budget to segments at or below baseline CPA.

Medium Confidence: Medium Ease: Easy

All Meta campaigns are conversion objective — no upper funnel spend is building future demand

What is happening: All 7 Meta campaigns run conversion or lead objectives (**PKR 280,064** in detected spend). The account relies entirely on existing market awareness. As audiences saturate, CPAs rise because no fresh awareness traffic feeds the funnel. Retargeting pools shrink and prospecting CPAs climb without upper funnel investment refreshing them.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: CPAs will continue rising as current audiences saturate without upper funnel campaigns refreshing the prospecting pool.

EVIDENCE	VALUE
Net recoverable	PKR 0

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this removes account drag before it turns into measurable waste.**

1. Allocate 10–**15%** of Meta spend to a Reach or Traffic campaign targeting a broad cold audience.
2. Use this upper funnel traffic as a retargeting audience for conversion campaigns (30/60/90 day windows).
3. Test video creative in the awareness campaign — cost efficient for reach and builds brand recognition.

Medium Confidence: High Ease: Easy

The 18 24 age segment buys impressions inefficiently

What is happening: The 18 24 age segment earns a **4.44%** CTR — **23%** of the best age segment's **19.18%**, on **PKR 102,513** of spend. You are paying for impressions that don't engage than the rest of the age mix.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: Reallocating this segment's impression budget to better engaging age segments would buy more qualified clicks at the same spend.

EVIDENCE	VALUE
Cpm	470
Segment	18 24
Confidence	High
Ctr percent	4.4%
Baseline cpm	530
Best ctr percent	19.2%

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

> **What this means for you: fixing this removes account drag before it turns into measurable waste.**

1. Exclude or down weight the 18 24 age segment and shift that budget to the better performing age segments.
2. Confirm the pattern on the next full reporting cycle before making it a permanent exclusion.
3. Re check CPM and CTR by segment after the change to confirm the efficiency gain.

09

ROADMAP & ACTION PLAN

The phased plan — what to do, in order

This is your action plan, sequenced by leverage: start at Phase 1 this week (stop active waste), then tighten efficiency, then build durable structure. Each item shows the move, the effort, and what it recovers.

Phase 1 THIS WEEK

Stop the bleeding — fix what is actively wasting spend or blocking delivery right now.

1. **alt Testing phasenew whatsapp reports conversions too cheap to be genuine — likely a misconfigured conversion event:** Open alt Testing phasenew whatsapp in the platform's Events/conversion settings and confirm exactly which event is firing as the conversion. TECHNICAL Optimization

Phase 2 WEEKS 2–4

Tighten efficiency — pull the high impact inefficiencies back toward target.

1. **Meta CPA is over target — driven by weak post click conversion, not expensive clicks:** Audit the landing page: load speed, message match, and friction in the conversion step. TECHNICAL Optimization
2. **The Islamabad Capital Territory region segment is wasting PKR 9,087:** Review the Islamabad Capital Territory region segment in the platform UI to confirm the underperformance. TECHNICAL PKR 9,087 recoverable
3. **The instagram placement is part of the same inefficiency (placement view):** Review the instagram placement segment in the platform UI to confirm the underperformance. ~1 HOUR Same spend (counted above)

Phase 3 ONGOING

Structure & scale — clear hygiene risks and build durable account structure.

1. **All Meta campaigns are conversion objective — no upper funnel spend is building future demand:** Allocate 10–**15%** of Meta spend to a Reach or Traffic campaign targeting a broad cold audience. ~1 HOUR Needs review
2. **The 18 24 age segment buys impressions inefficiently:** Exclude or down weight the 18 24 age segment and shift that budget to the better performing age segments. ~1 HOUR Account hygiene risk
3. **7 Meta campaigns run uncapped automatic bidding:** Set a cost per result goal (cost cap) at or slightly above your target on the highest spend campaigns. ~1 HOUR Needs review
4. **Ad set budgets are below Meta's learning phase minimum:** Consolidate overlapping ad sets so budget concentrates enough volume to exit learning. ~1 HOUR Needs review
5. **"New Leads campaign | Sales Person Hiring" converts clicks at a fraction of your best campaign:** Review the post click experience for "New Leads campaign | Sales Person Hiring" — the offer, landing page, or messaging first reply flow — against your best campaign's. ~1 HOUR Needs review

METHOD

Benchmarks, confidence & assumptions

- **Numbers.** Every figure comes from verified account data. The report does not invent chart values.
- **Scope.** Figures cover all 7 campaigns that spent this period. The Active vs Paused breakdown splits the total: PKR 274,560 from 5 active campaigns and PKR 5,504 from 2 paused. The per campaign comparison and recommendations focus on the active set, which is what can still be optimised.
- **Benchmarks.** No benchmark section is rendered because no benchmark facts were available.
- **Confidence.** Confidence labels reflect data coverage, severity, and sample notes.
