Benchmarks, confidence & assumptions

What this audit found

The single most important finding in this audit: **PKR 7,089** of proven delivery (**84%** of account spend) is blocked until this ad clears review. Restoring it is the highest leverage action in the account.

The real story: A proven ad is blocked by Meta policy review — the lead one drove **90%** of all results. The account is constrained by approval status, not media buying: restoring delivery is the highest leverage move, and no budget or bid change can outperform it. Spend is also leaking to GB the budget cannot compete in — the root cause behind the zero conversion campaigns. The fix is correcting the location targeting, not pausing the campaigns.

Lead issue: Meta ad "New Engagement Ad" is disapproved and blocking delivery. The ad "New Engagement Ad" in "New Engagement Campaign" is Disapproved — a hard delivery stop. It carries **PKR 7,089** of spend (**84%** of the account). It drove 181 of the account's 201 results (**90%**) before the block. A disapproved ad cannot serve until it is fixed and re reviewed, so no bid, budget, or audience change can outperform restoring it. Policy reason reported: Non Functional Landing Page.

Why it matters: Findings are ranked by leverage — the most damaging issue leads (severity and root cause gravity first, then confidence and recoverable spend), not simply the biggest dollar figure.

Next move: Start with the first issue in this report, then re run the audit after the next full reporting cycle to measure the delta.

THIS PERIOD	PER QUARTER	ANNUALIZED
1,477	≈ 4,431	≈ 17,724
identified opportunity	if the pattern persists	directional projection

Projection multiplies the recoverable spend measured this period and assumes spend and performance patterns remain stable.

01

HEALTH SCORE

Where the 73 comes from

The score breakdown shows which account areas are healthy and which areas generated findings.

Scores below 85 are treated as pressure points.

02

ACCOUNT SCORECARD

The headline metrics, against target

Each account metric measured against its industry benchmark or your declared target, with a clear verdict — so every claim in this audit is anchored to a number you can check.

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Total spend	PKR 8,482	— —	
Conversions	201	— —	
Click through rate	3.68%	≥ 0.6%	Strong
Avg cost per click	PKR 9.69	— —	
Cost per acquisition	PKR 42	PKR 40	On target

CPA target (PKR 40) from your intake; CTR benchmark for Lead Gen (from your profile) on Meta Ads.

03

MONEY MAP

Where the recoverable spend is concentrated

Only findings with measured financial evidence appear here. Structural risks stay out of this chart unless the engine can quantify them.

Meta spend is leaking to gb — likely a location targeting error	PKR 749
The instagram placement segment is wasting pkr 728	PKR 728

04

FINDINGS

10 findings, ranked by impact

Findings are ordered by leverage — severity and root cause gravity first, then confidence, then recoverable spend.

#	FINDING	SEVERITY	IMPACT
1	Meta ad "New Engagement Ad" is disapproved and blocking delivery	Critical	PKR 7,089 blocked
2	Meta spend is leaking to GB — likely a location targeting error	High	PKR 749 recoverable
3	Meta CPA is over target — driven by weak post click conversion, not expensive clicks	High	Optimization
4	.8% below a similar account in your portfolio	High	Needs review
5	The instagram placement segment is wasting PKR 728	Medium	PKR 728 recoverable
6	The Punjab region is part of the same inefficiency (region view)	Medium	Same spend (counted above)
7	1 Meta campaign runs uncapped automatic bidding	Medium	Needs review
8	Ad set budgets are below Meta's learning phase minimum	Medium	Needs review
9	Campaign naming is inconsistent and hides targeting at a glance	Medium	Needs review
10	4 campaigns had no delivery in this window	Low	Account hygiene risk

Money impact is shown only when the account data supports a reliable estimate. Other rows are still important business risks.

CAMPAIGN PERFORMANCE

Every campaign, with a verdict

Each campaign's own numbers against the account baseline (cost per result **PKR 42**) — so the diagnosis is grounded in per campaign performance, not a blended average.

CAMPAIGN	SPEND	RESULTS	COST / RESULT	STATUS	VERDICT
New Engagement Campaign	PKR 7,089	181	PKR 39	No peer	The only campaign of its conversion type — no comparable peer to judge its cost against. Track it against your own target, not the account average.
Kingdom Testing broad	PKR 749	5	PKR 150	Above avg	Converting, but above the account average — room to tighten.
Pesh WA 23/5	PKR 643	15	PKR 43	At/below avg	At or below the account's average cost — protect and scale this one.

Cost per result uses each campaign's own conversions; the verdict compares it to the account baseline.

CAMPAIGN DEEP DIVE

Top campaigns, scored

Each top spending campaign measured against its CTR benchmark and CPA target, with a verdict and its next move — the per campaign view a strategist works from.

No peer PKR 7,089

New Engagement Campaign

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 7,089	— —	
Conversions	181	— —	
Click through rate	3.85%	≥ 0.6%	Strong
Cost per result	PKR 39	vs PKR 40	On target

The only campaign of its conversion type — no comparable peer to judge its cost against. Track it against your own target, not the account average.

1. Protect this campaign — it is carrying the account's efficiency.
2. Scale budget in small increments (~20%) while cost per result holds.
3. Add a backup ad group or audience layer to de risk creative/audience fatigue.

Above avg PKR 749

Kingdom Testing broad

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 749	— —	
Conversions	5	— —	
Click through rate	3.88%	≥ 0.6%	Strong
Cost per result	PKR 150	vs PKR 40	275% over

Converting, but above the account average — room to tighten.

1. Above the account average — tighten targeting or add/lower a cost per result cap.
2. Compare its audience and placement mix against the best performing campaign.
3. Re evaluate next cycle and reallocate toward what converts.

At/below avg PKR 643

Pesh | WA | 23/5

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Spend	PKR 643	— —	
Conversions	15	— —	
Click through rate	2.30%	≥ 0.6%	Strong
Cost per result	PKR 43	vs PKR 40	On target

At or below the account's average cost — protect and scale this one.

1. Protect this campaign — it is carrying the account's efficiency.
2. Scale budget in small increments (~**20%**) while cost per result holds.
3. Add a backup ad group or audience layer to de risk creative/audience fatigue.

07

EVIDENCE

The evidence, finding by finding

Each finding shows what is happening, the business impact, supporting evidence, confidence, and the recommended fix.

Meta ad "New Engagement Ad" is disapproved and blocking delivery

What is happening: The ad "New Engagement Ad" in "New Engagement Campaign" is Disapproved — a hard delivery stop. It carries **PKR 7,089** of spend (**84%** of the account). It drove 181 of the account's 201 results (**90%**) before the block. A disapproved ad cannot serve until it is fixed and re reviewed, so no bid, budget, or audience change can outperform restoring it. Policy reason reported: Non Functional Landing Page.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: **PKR 7,089** of proven delivery (**84%** of account spend) is blocked until this ad clears review. Restoring it is the highest leverage action in the account.

Recoverable 100%

PKR 7,089 blocked within the affected spend pool.

EVIDENCE	VALUE
Blocks delivery	Yes
Net recoverable	PKR 0
Spend share percent	83.6%

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this restores **PKR 7,089 of proven delivery that is currently blocked.**

1. Open Ads Manager → Account Quality and read the specific policy reason attached to this ad.
2. Correct the creative or copy to address the cited policy, then request a review — do Not duplicate the ad, which typically reproduces the same flag.
3. Re check effective status after the review completes and resume scaling only once it is Approved.

Meta spend is leaking to GB — likely a location targeting error

What is happening: **PKR 749** was delivered to GB at a 11.1× PK CPM (**PKR 3,636** vs **PKR 328**), at 5 conversion(s), while your primary market (PK) runs at **PKR 328** CPM. A budget sized for PK cannot compete in the GB auction, which is exactly the pattern of an accidental Locations setting rather than a creative or bidding problem.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: **PKR 749** delivered to GB returned 5 conversions — recoverable by correcting the campaign's location targeting to PK.

Recoverable 100%

PKR 749 recoverable within the affected spend pool.

EVIDENCE	VALUE
Confidence	High

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this can recover **PKR 749 in the next comparable period.**

1. Open the ad set's Locations setting and confirm it is set to PK (or the intended market) — GB delivery is almost certainly unintended.
2. If GB targeting was deliberate, raise that campaign's budget to a level that can compete in the GB auction and set a market appropriate cost target; the current budget cannot.
3. Re check the country split after the next full reporting cycle to confirm the leak has stopped.

Meta CPA is over target — driven by weak post click conversion, not expensive clicks

What is happening: Actual CPA **PKR 42.2** vs target **PKR 40** (5.5% over target). Actual **CTR 3.68%** vs benchmark (warning **0.6%**, good **1.2%**). CPA is over target but CTR is at/above benchmark — the bottleneck is post click conversion (landing page, offer, or tracking), not click cost.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: CPA is **5.5%** over your **PKR 40** target. Because CTR is healthy, the highest leverage fix is post click: landing page, offer, and conversion tracking — not bids or creative.

Optimization

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 42	vs PKR 40	On target
Confidence	High	—	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: this is a high leverage optimization — fixing the driver moves cost per result toward your target without spending more.

1. Audit the landing page: load speed, message match, and friction in the conversion step.
2. Verify conversion tracking is firing correctly — under counting inflates CPA.
3. Test offer / Cta changes before increasing bids.

.8% below a similar account in your portfolio

What is happening: This account's CTR is **3.677%** vs **5.985%** on k (same platform, same business type). Same platform and comparable profile — the gap points to creative/relevance, not platform pricing.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: Closing the CTR gap to your own better performing Meta account (**5.985%**) would lower CPC and CPA at the same spend. The winning account is the template — copy its hook, format, and offer framing.

62.8% gap

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Click through rate	3.68%	vs 5.99%	Below benchmark
Confidence	High	— —	

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this removes account drag before it turns into measurable waste.

1. Pull the top creatives from k and adapt their hooks/format here.
2. A/B test the adapted creative against the current best ad.
3. Re audit after 7 days to confirm the CTR gap is closing.

The instagram placement segment is wasting PKR 728

What is happening: The instagram placement segment has a **PKR 91** cost per result (CPA) vs the account's **PKR 42** baseline — **PKR 728** of its spend is the excess above what that result would cost at the baseline rate.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: **PKR 728** in this segment is recoverable by reducing or excluding it. Reallocate to segments performing at or below the **PKR 42** baseline CPA.

PKR 728 recoverable

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 91	vs PKR 42	115% over
Recoverable spend	PKR 728	—	—

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this can recover **PKR 728 in the next comparable period.**

1. Review the instagram placement segment in the platform UI to confirm the underperformance.
2. Exclude or down bid the instagram segment after confirming the trend on the next full reporting cycle.
3. Reallocate the recovered budget to segments at or below baseline CPA.

The Punjab region is part of the same inefficiency (region view)

What is happening: The Punjab region segment has a **PKR 62** cost per result (CPA) vs the account's **PKR 42** baseline — **PKR 507** of its spend is the excess above what that result would cost at the baseline rate.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: The Punjab region has a **PKR 62** cost per result vs the account's **PKR 42** baseline cost per result, on **PKR 1,562** of spend. This is the region view of an inefficiency the campaign level finding already counts — acting here recovers part of that same spend, not additional money.

Same spend (counted above)

METRIC	VALUE	TARGET / BENCHMARK	STATUS
Cost per acquisition	PKR 62	vs PKR 42	48% over
Recoverable spend	PKR 62	— —	

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this can recover **PKR 62 in the next comparable period.**

1. Review the Punjab region segment in the platform UI to confirm the underperformance.
2. Exclude or down bid the Punjab segment after confirming the trend on the next full reporting cycle.
3. Reallocate the recovered budget to segments at or below baseline CPA.

The phased plan — what to do, in order

This is your action plan, sequenced by leverage: start at Phase 1 this week (stop active waste), then tighten efficiency, then build durable structure. Each item shows the move, the effort, and what it recovers.

Phase 1 THIS WEEK

Stop the bleeding — fix what is actively wasting spend or blocking delivery right now.

1. **Meta ad "New Engagement Ad" is disapproved and blocking delivery:** Open Ads Manager → Account Quality and read the specific policy reason attached to this ad. ~1 HOUR **PKR 7,089 blocked**

Phase 2 WEEKS 2-4

Tighten efficiency — pull the high impact inefficiencies back toward target.

1. **Meta spend is leaking to GB — likely a location targeting error:** Open the ad set's Locations setting and confirm it is set to PK (or the intended market) — GB delivery is almost certainly unintended. ~1 HOUR **PKR 749 recoverable**
2. **Meta CPA is over target — driven by weak post click conversion, not expensive clicks:** Audit the landing page: load speed, message match, and friction in the conversion step. **TECHNICAL Optimization**
3. **.8% below a similar account in your portfolio:** Pull the top creatives from k and adapt their hooks/format here. ~1 HOUR **Needs review**
4. **The instagram placement segment is wasting PKR 728:** Review the instagram placement segment in the platform UI to confirm the underperformance. ~1 HOUR **PKR 728 recoverable**
5. **The Punjab region is part of the same inefficiency (region view):** Review the Punjab region segment in the platform UI to confirm the underperformance. ~1 HOUR **Same spend (counted above)**

Phase 3 ONGOING

Structure & scale — clear hygiene risks and build durable account structure.

1. **1 Meta campaign runs uncapped automatic bidding:** Set a cost per result goal (cost cap) at or slightly above your target on the highest spend campaigns. ~1 HOUR **Needs review**
2. **Ad set budgets are below Meta's learning phase minimum:** Consolidate overlapping ad sets so budget concentrates enough volume to exit learning. ~1 HOUR **Needs review**
3. **Campaign naming is inconsistent and hides targeting at a glance:** Adopt a convention such as [Funnel] | [Market] | [Objective] | [Date] — e.g. WA | PK | Leads | 2026 06 18. ~1 HOUR **Needs review**
4. **4 campaigns had no delivery in this window:** Review the zero delivery campaigns and delete or formally archive the ones you don't intend to relaunch. ~1 HOUR **Account hygiene risk**

MT

METHOD

Benchmarks, confidence & assumptions

- **Numbers.** Every figure comes from verified account data. The report does not invent chart values.

- **Scope.** Every campaign was paused during this period, so the figures cover all campaigns — there is no active set to isolate.
 - **Benchmarks.** No benchmark section is rendered because no benchmark facts were available.
 - **Confidence.** Confidence labels reflect data coverage, severity, and sample notes.
-
