

Meta ad "New Engagement Ad" is disapproved and blocking delivery

PKR 7,089 of proven delivery (**57%** of account spend) is blocked until this ad clears review. Restoring it is the highest leverage action in the account. is the clearest quantified opportunity in this audit.

EXECUTIVE SUMMARY

What this audit found

PKR 7,089 of proven delivery (**57%** of account spend) is blocked until this ad clears review. Restoring it is the highest leverage action in the account. is the single most important number in this audit.

The real story: A proven ad is blocked by Meta policy review — the lead one drove **89%** of all results. The account is constrained by approval status, not media buying: restoring delivery is the highest leverage move, and no budget or bid change can outperform it. Spend is also leaking to GB the budget cannot compete in — the root cause behind the zero conversion campaigns. The fix is correcting the location targeting, not pausing the campaigns.

Lead issue: Meta ad "New Engagement Ad" is disapproved and blocking delivery. The ad "New Engagement Ad" in "New Engagement Campaign" is Disapproved — a hard delivery stop. It carries **PKR 7,089** of spend (**57%** of the account). It drove 181 of the account's 204 results (**89%**) before the block. A disapproved ad

cannot serve until it is fixed and re reviewed, so no bid, budget, or audience change can outperform restoring it.
Policy reason reported: Non Functional Landing Page.

Why it matters: Findings are ranked by leverage — the most damaging issue leads (severity and root cause gravity first, then confidence and recoverable spend), not simply the biggest dollar figure.

Next move: Start with the first issue in this report, then re run the audit after the next full reporting cycle to measure the delta.

THIS PERIOD	PER QUARTER	ANNUALIZED
7,089	≈ 21,267	≈ 85,068
identified opportunity	if the pattern persists	directional projection

Projection multiplies the measured period impact and assumes spend and performance patterns remain stable.

01

HEALTH SCORE

Where the 67 comes from

The score breakdown shows which account areas are healthy and which areas generated findings.

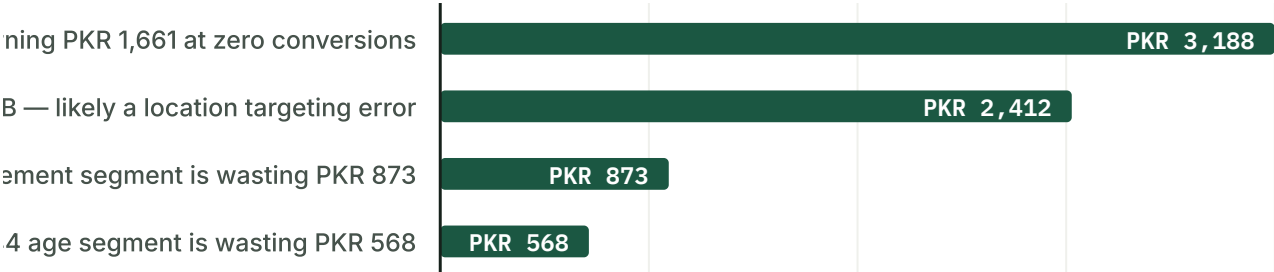

Scores below 85 are treated as pressure points.

02

MONEY MAP

Where the recoverable spend is concentrated

Only findings with measured financial evidence appear here. Structural risks stay out of this chart unless the engine can quantify them.

Measured recoverable spend by finding.

03

FINDINGS

9 findings, ranked by impact

Findings are ordered by leverage — severity and root cause gravity first, then confidence, then recoverable spend.

#	FINDING	SEVERITY	IMPACT
1	Meta ad "New Engagement Ad" is disapproved and blocking delivery	Critical	PKR 7,089 blocked
2	Meta has a campaign burning PKR 1,661 at zero conversions	Critical	PKR 3,188 recoverable
3	Meta spend is leaking to GB — likely a location targeting error	High	PKR 2,412 recoverable
4	The instagram placement segment is wasting PKR 873	Medium	PKR 873 recoverable
5	The 35 44 age segment is wasting PKR 568	Medium	PKR 568 recoverable
6	3 Meta campaigns run uncapped automatic bidding	Medium	Needs review
7	Ad set budgets are below Meta's learning phase minimum	Medium	Needs review
8	Campaign naming is inconsistent and hides targeting at a glance	Medium	Needs review

Money impact is shown only when the account data supports a reliable estimate. Other rows are still important business risks.

04

CAMPAIGN PERFORMANCE

Every campaign, with a verdict

Each campaign's own numbers against the account baseline (cost per result **PKR 61**) — so the diagnosis is grounded in per campaign performance, not a blended average.

CAMPAIGN	SPEND	RESULTS	COST / RESULT	VERDICT
New Engagement Campaign	PKR 7,089	181	PKR 39	At or below the account's average cost — protect and scale this one.
Pesh WA 23/5	PKR 2,928	23	PKR 127	Converting, but above the account average — room to tighten.
Kingdom Testing	PKR 1,661	0	—	Material spend, zero conversions — likely a targeting or geo misconfiguration.
Kingdom Testing broad	PKR 749	0	—	Paused with little data — low priority until reactivated.

Cost per result uses each campaign's own conversions; the verdict compares it to the account baseline.

05

EVIDENCE

The evidence, finding by finding

Each finding shows what is happening, the business impact, supporting evidence, confidence, and the recommended fix.

Meta ad "New Engagement Ad" is disapproved and blocking delivery

What is happening: The ad "New Engagement Ad" in "New Engagement Campaign" is Disapproved — a hard delivery stop. It carries **PKR 7,089** of spend (**57%** of the account). It drove 181 of the account's 204 results (**89%**) before the block. A disapproved ad cannot serve until it is fixed and re reviewed, so no bid, budget, or audience change can outperform restoring it. Policy reason reported: Non Functional Landing Page.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: **PKR 7,089** of proven delivery (**57%** of account spend) is blocked until this ad clears review. Restoring it is the highest leverage action in the account.

Recoverable 100%

PKR 7,089 blocked within the affected spend pool.

EVIDENCE	VALUE
Blocks delivery	Yes
Result share percent	88.7%

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this restores **PKR 7,089 of proven delivery that is currently blocked.**

1. Open Ads Manager → Account Quality and read the specific policy reason attached to this ad.
2. Correct the creative or copy to address the cited policy, then request a review — do Not duplicate the ad, which typically reproduces the same flag.
3. Re check effective status after the review completes and resume scaling only once it is Approved.

Meta has a campaign burning PKR 1,661 at zero conversions

What is happening: The account average CPA of **PKR 61** hides a wide spread across campaigns. Kingdom Testing spent **PKR 1,661** with zero conversions against a **PKR 61** account baseline. By contrast, New Engagement Campaign runs at **PKR 39** — at or below baseline. Treating the account as uniformly inefficient (an across the board cut) would damage the healthy campaign while leaving the real offender untouched.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: **PKR 3,188** is recoverable by bringing these 2 campaigns toward the **PKR 61** account baseline — without touching campaigns already at or below it.

EVIDENCE	VALUE
Confidence	High
Min sample passed	Yes

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this can recover **PKR 3,188 in the next comparable period.**

1. Isolate Kingdom Testing and diagnose its CPA driver — audience/targeting, landing page, or bidding — before changing account wide settings.
2. Protect and consider scaling New Engagement Campaign (**PKR 39** CPA); it is carrying the account.
3. Manage to per campaign CPA targets rather than a single blended account average.

Meta spend is leaking to GB — likely a location targeting error

What is happening: **PKR 2,412** was delivered to GB at a 16.7× PK CPM (**PKR 4,292** vs **PKR 257**), at 6 conversion(s), while your primary market (PK) runs at **PKR 257** CPM. A budget sized for PK cannot compete in the GB auction, which is exactly the pattern of an accidental Locations setting rather than a creative or bidding problem.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: **PKR 2,412** delivered to GB returned 6 conversions — recoverable by correcting the campaign's location targeting to PK.

Recoverable 100%

PKR 2,412 recoverable within the affected spend pool.

EVIDENCE	VALUE
Confidence	High
Cpm multiple of home	17

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this can recover **PKR 2,412 in the next comparable period.**

1. Open the ad set's Locations setting and confirm it is set to PK (or the intended market) — GB delivery is almost certainly unintended.
2. If GB targeting was deliberate, raise that campaign's budget to a level that can compete in the GB auction and set a market appropriate cost target; the current budget cannot.
3. Re check the country split after the next full reporting cycle to confirm the leak has stopped.

The instagram placement segment is wasting PKR 873

What is happening: The instagram placement segment runs at **PKR 119** CPA vs a **PKR 61** platform baseline — **PKR 873** of that spend is excess cost above baseline efficiency.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: **PKR 873** in this segment is recoverable by reducing or excluding it. Reallocate to segments performing at or below the **PKR 61** baseline CPA.

PKR 873 recoverable

EVIDENCE	VALUE
Spend	PKR 1,787
Reason	Worse than baseline
Segment	Instagram
Sample note	Sufficient sample
Conversions	15

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this can recover **PKR 873 in the next comparable period.**

1. Review the instagram placement segment in the platform UI to confirm the underperformance.
2. Exclude or down bid the instagram segment after confirming the trend on the next full reporting cycle.
3. Reallocate the recovered budget to segments at or below baseline CPA.

The 35 44 age segment is wasting PKR 568

What is happening: The 35 44 age segment runs at **PKR 102** CPA vs a **PKR 61** platform baseline — **PKR 568** of that spend is excess cost above baseline efficiency.

Why it is happening: This segment converts at a worse rate than the account baseline, so each result here costs more than it does elsewhere; the blended average hides the gap.

Estimated business impact: **PKR 568** in this segment is recoverable by reducing or excluding it. Reallocate to segments performing at or below the **PKR 61** baseline CPA.

PKR 568 recoverable

EVIDENCE	VALUE
Spend	PKR 1,421
Reason	Worse than baseline
Segment	35 44
Sample note	Sufficient sample
Conversions	14

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this can recover **PKR 568 in the next comparable period.**

1. Review the 35 44 age segment in the platform UI to confirm the underperformance.
2. Exclude or down bid the 35 44 segment after confirming the trend on the next full reporting cycle.
3. Reallocate the recovered budget to segments at or below baseline CPA.

3 Meta campaigns run uncapped automatic bidding

What is happening: 3 campaigns carrying **PKR 11,679** use Highest Volume (lowest cost) bidding with no cost per result cap. The algorithm optimises for volume regardless of efficiency — fine at small spend, but as budgets scale there is no ceiling on cost per result.

Why it is happening: The evidence below isolates the pattern in the account data. Confirm the specific driver — targeting, creative, bidding, or tracking — against these figures before changing budgets.

Estimated business impact: These campaigns run without a cost per result ceiling. As budgets scale, a cost cap near your target is what keeps cost per result from drifting — a guardrail, not recovered spend.

Expected outcome after fixing: spend should shift away from the flagged weakness and performance should move closer to the account baseline.

What this means for you: fixing this removes account drag before it turns into measurable waste.

1. Set a cost per result goal (cost cap) at or slightly above your target on the highest spend campaigns.
2. Raise budgets only after a cap is in place, so the algorithm has an efficiency constraint and not just a volume goal.
3. Watch for under delivery after capping; loosen the cap slightly if delivery stalls.

AP

ACTION PLAN

What to do this week, in order

This sequence prioritizes business impact first, then confidence and ease of implementation.

ORDER	ACTION	EFFORT	EXPECTED RESULT
1	Meta ad "New Engagement Ad" is disapproved and blocking delivery: Open Ads Manager → Account Quality and read the specific policy reason attached to this ad.	~1 hour	PKR 7,089 blocked
2	Meta has a campaign burning PKR 1,661 at zero conversions: Isolate Kingdom Testing and diagnose its CPA driver — audience/targeting, landing page, or bidding — before changing account wide settings.	~1 hour	PKR 3,188 recoverable
3	Meta spend is leaking to GB — likely a location targeting error: Open the ad set's Locations setting and confirm it is set to PK (or the intended market) — GB delivery is almost certainly unintended.	~1 hour	PKR 2,412 recoverable
4	The instagram placement segment is wasting PKR 873: Review the instagram placement segment in the platform UI to confirm the underperformance.	~1 hour	PKR 873 recoverable
5	The 35 44 age segment is wasting PKR 568: Review the 35 44 age segment in the platform UI to confirm the underperformance.	~1 hour	PKR 568 recoverable
